

Biostat International, Inc.

presents

Biostatistics 101

This course is designed to offer a basic understanding of the essential elements of biostatistics. Additionally, this class will enable the participant to appreciate how the statistical outcomes in a research trial are reached.

Dates and Times TBD

Topics that will be reviewed and discussed in this seminar will be:

- Populations And Samples
- How To Summarize Data
- Probability & Normal Distribution
- Estimation And Confidence Interval
- Hypothesis Testing And p-value
- Sample Size Estimation In Clinical Trials
- Randomization And Study Design

For more information, please e-mail Jennifer Bryan at jbryan@biostatinc.com
